Fulltext Availability:

Detailed Description

Detailed Description

... problems arising in large scale systems, like deficiencies in state /
country voting systems, credit card **fraud** , privacy and security
breaches at health data banks and at financial service organizations,
NECrossoft 2000...

...Defense - no standard protection except making hardware protection at a
microprocessor level.

10. Password File Theft

Every user name has a password entry in a hashed form which can be read
...

...extremely effective against computer data processing dictionary or brute
force attacks, password guessing, password file **theft** , shoulder
surfing, eavesdropping, videotaping, Trojan Horse attack, memory sniffing
attacks, keystroke monitoring, and network sniffing...

Purchasing card fraud determination method involves matching identifiers and reference portion of applicant data with fraud database

Original Titles:

Scoring methodology for purchasing card fraud detection .

Alerting Abstract ...A purchasing card applicant data includes unique identifier, non-unique identifier and reference portion. The **match** scores for **match** occurring in the identifier, non-unique identifier and reference portion with respect to a fraud...

...are calculated. The fraud purchasing card transaction, is determined based on the sum of the **match** scores....ADVANTAGE - Enables **detecting** purchasing card **fraud** reliably...

...DESCRIPTION OF DRAWINGS - The figure shows the flow diagram of fraud **matching** process.

Title Terms.../Index Terms/Additional Words: **MATCH** ;

Class Codes

International Classification (Main): G06F-017/30

Original Publication Data by Authority

Original Abstracts:

A method and system is disclosed for scoring a **match** between applicant data provided by a client and data stored in a fraud database. The...

...a reference portion, a processor having access to the merchant information for calculating a first **match** score based on a **match** occurring in the non-unique identifier portion, a second **match** score based on a **match** occurring in the unique identifier portion, and a third **match** score based on a **match** occurring in the reference portion, and wherein the processor sums the first, second, and third **match** scores to arrive at a **total match** score to determine whether the **total match** score has exceeded a predefined **match** score. If the predefined **match** score is exceed then an alert is sent to the client informing the client

that a fraud **match** with a high degree of reliability has occurred.

Claims:

...applicant data including a unique identifier portion having at least one unique identifier data element, a non unique **identifier** portion having at least one non-unique identifier data element, and a reference **portion** having at least one reference data element; determining whether any of the purchasing card applicant data matches any of the fraud data **used** in known frauds of the fraud database; determining which matched purchasing card applicant data occurs in the **unique** identifier portion, the non-unique identifier portion, and the reference portion; determining which at least one unique identifier data element of the unique identifier portion matches **any** of the **fraud** data used in known frauds of the fraud database for each matched purchasing card applicant data occurring in the unique identifier **portion**; determining which at least one non-unique identifier data element of the non-unique identifier portion matches any **of** the fraud **data** used in known frauds of the **fraud** database for each matched purchasing card applicant data occurring in the non-unique identifier portion; **determining** which at least one reference data element of the reference portion matches any of the fraud data used in known frauds of the fraud database **for** each matched purchasing card applicant data occurring in the reference portion; calculating a first match **score** based on each matched at least one unique identifier data element; calculating a second **match** score based on each **matched** at least one **non**-unique identifier **data** element; calculating a total match **score** by summing the first and second match scores; and **determining** likelihood of the purchasing card transaction being **fraudulent** as a function of the total match score, **wherein** the purchasing card transaction is determined to be fraudulent when the total match score is greater than a **predefined match** score.

Tokenless electronic check authorization for financial transactions,
involves comparing input values of data pertaining to transaction with
registered data and authorizing electronic check on successful comparison

Alerting Abstract ...NOVELTY - Transaction is done between payor and
payee by forwarding payee bid identification data, transaction **amount** and

payor biometric samples to electronic identicator. The identicator **compares** input data with registered data and on successful **comparison** electronic check is authorized. DESCRIPTION - Payor and payee are registered with electronic identicator, biometric sample, payor checking **amount** and payee identification data. Payee identification data comprises payee hardware ID code, payee telephone number...

...financial account number, payee biometric and payee biometric and personal identification number (PIN) combination. Transaction **amount** comprises price information, list of goods and services, payee name, date or time, location or...

...iris scan and voice print. An INDEPENDENT CLAIM is also included for tokenless electronic check **authorization** device...

...realized. The computer system is altered in case of reregistration of payor and during biometric **theft**, payors personal **identification** number is changed when payor's biometric sample is determined to be fraudulently duplicated. Thus highly secured access is enabled and resistant to fraudulent transaction **authorization** attempts by unauthorized user's is also improved...

ABSTRACT

PURPOSE: To easily **detect illegality** by mutually **authenticating** a card and a card terminal, calculating a card transaction certification(CF) number based upon card owner specifying data read out of the card and input transaction data and **comparing** the calculated result with a reference value by a credit company or the like...

...is connected to a portable IC card terminal 11 and mutual CF is executed to **confirm** the validity of both the data. Owner specifying data inputted by the card owner are **compared** with the card owner specifying data stored in the card, the validity of the owner is **confirmed**, the purchased **amount** of commodities, a credit member number, etc., are sent to a banking agency or the like and data obtained based upon sent information are scrambled and **compared** by the same key and the same algorithm in both of a host computer in the banking agency and the terminal 11 to **confirm** the validity of the card and the terminal 11 by the host computer and authenticate...

Multi-computer system with network for embedding and reading watermark - facilitates scale and rotation registration for steganographic decoding using rotationally symmetric steganographically embedded patterns and subliminal digital graticules, for enhanced security in financial transactions

Original Titles:

DURCH GEBRAUCH VON INFORMATIONEN IN DATENOBJEKTEN VERBUNDENES
KOMPUTERSYSTEM

COMPUTER SYSTEM LINKED BY USING INFORMATION IN DATA OBJECTS

SYSTEMES INFORMATIQUES RELIES PAR L'UTILISATION D'INFORMATIONS CONTENUES
DANS DES OBJETS DE DONNEES

Method and apparatus for discerning image distortion by reference to
encoded marker signals

Watermarking methods and media

Computer system linked by using information in data objects

Methods for marking images

Method for monitoring internet dissemination of image, video, and/or audio
files

Printable interfaces and digital linking with embedded codes

Method for monitoring internet dissemination of image, video, and/or audio
files

Embedding information in a digital image digitized from a developed
photographic film

Method and apparatus for discerning image distortion by reference to
encoded marker signals

Method and apparatus for discerning image distortion by reference to
encoded marker signals

Method for monitoring internet dissemination of image, video, and/or audio
files

Printable interfaces and digital linking with embedded codes

Decoding steganographic messages embedded in media signals
Digital watermark decoding method
Watermarking methods and media
Computer system linked by using information in data objects
Method and system for managing, accessing and paying for the use of
copyrighted electronic media
Data hiding method and system for embedding and extracting information in
signals
Method for monitoring internet dissemination of image, video and/or audio
files

COMPUTER SYSTEM LINKED BY USING INFORMATION IN DATA OBJECTS

Protector for access to data processor permanent memory - utilises access and error memories with access only via programmed microprocessor

Original Titles:

Vorrichtung fuer den Schutz des Zugangs zu einem Dauerspeicher bei einer Datenverarbeitungsanlage

Tragbarer Informationstraeger

Verfahren zum Aufzeichnen einer Zugriffsinformation oder einer Fehlerinformation in einem Informationstrager

PORTABLE DATA CARRIER

Device for the protection of access to a permanent memory of a portable data carrier

Local Applications (No Type Date): FR 197726107 A 19770826; FR 197917171 A 19790702; DE 3025044 A 19800702; US 1980137973 A 19800407; DE 3025044 A 19800702; JP 1992272038 A 19800702; JP 1995238791 A 19800702; DE 3025044 A 19800702; DE 3051266 A 19800702; DE 3025044 A 19800702; DE 3051266 A 19800702
